SMARTBRYTE

Homepage build brief for Lovable

Product definition • exact homepage content • visual direction • implementation instructions

PROJECT SCOPE
Build one polished, responsive homepage for SmartBryte. Do not build the About, Programmes, Contact or application pages. Do not add backend systems or invent missing content.

Prepared from the supplied SmartBryte homepage copy, two design-system MD files and two visual reference images.

Important: the first instructional/process portion of the supplied masterclass document is intentionally excluded. This brief uses only the SmartBryte homepage content.

1. Product definition

SmartBryte is an online school for children and young people aged 7–22. Its audience for this homepage is parents who are considering additional learning opportunities for their children.

The school combines regular academic learning with technology, AI awareness and practical digital skills. The homepage must help a parent understand what SmartBryte is, why it matters, what each age-group programme covers, what their child can gain, and how to take the next step.

Primary website objective

Present SmartBryte clearly and persuasively, build parent confidence through specific information, and guide interested parents towards the application step.

Primary audience

Parents or guardians researching educational opportunities for learners aged 7–22. The experience should feel trustworthy and clear to adults while remaining visually engaging and age-appropriate for a children-and-youth education brand.

Build scope and exclusions

• Build the homepage only, as one continuous page with section navigation.

• Do not create separate About Us, Programmes, Contact Us or Application pages.

• Do not add login, registration, payment, LMS, booking, database, CRM, newsletter or other backend functionality.

• Do not invent tuition prices, teacher names, contact details, addresses beyond the supplied Lekki, Lagos reference, statistics, awards, accreditations, school history or testimonials.

• Do not create additional marketing copy, slogans, claims, programme details or FAQs.

• Do not rewrite, paraphrase, shorten, correct, polish or 'improve' any supplied homepage wording. Use the copy in Section 7 verbatim.

What can be interactive

Keep interaction lightweight and homepage-native: navigation can scroll to sections; visible CTA buttons can scroll to the relevant homepage section. FAQ items may use a simple frontend expand/collapse treatment only if it does not introduce new content. Do not connect forms, external services or backend actions. The final Apply Now CTA must not pretend an application system exists; keep its visual treatment and make it a non-destructive placeholder or scroll target until a real application destination is supplied.

2. Source files and how Lovable must use them

The user will attach the following materials to the Lovable project alongside this PDF:

• DESIGN (10).md — SuperHi style reference.

• DESIGN (9).md — Huddle style reference.

• WonderKids landing-page exploration image — playful children's learning website reference.

• TriVision school homepage image — education website layout and section-architecture reference.

• This SmartBryte Lovable Homepage Build Brief PDF — authoritative product scope and exact content.

Mandatory review sequence

• Open and inspect both MD files completely, not just their opening summaries. Extract their visual principles, component patterns, typography, spacing, card treatments, shape language, colour use and layout rules.

• Inspect both supplied images at full size. Study the composition, hierarchy, section sequencing, image placement, card layouts, hero treatment, decorative devices and footer structure.

• Compare the four design references and identify their shared principles and their differences. Do not simply select one reference and reproduce it.

• Create a coherent SmartBryte visual direction by combining compatible ideas from the references while resolving conflicts deliberately.

• Use the SmartBryte content in this PDF as the single source of truth for all visible website wording.

Source priority when instructions conflict

• Content and factual claims: this PDF's exact homepage copy always wins.

• Product scope: this PDF always wins. Homepage only; no extra pages or systems.

• Visual design: synthesise both MD files and both images. Do not copy one reference wholesale.

• Technical implementation: use Lovable's normal supported implementation approach, but do not add features outside the stated scope.

3. Visual synthesis: the relationship between the references

SuperHi MD + WonderKids image: playful learning energy

Borrow the sense of an imaginative learning environment: friendly geometric shapes, lively colour accents, rounded surfaces, playful visual rhythm, expressive display typography and small decorative moments that make education feel inviting. Use these details as accents around the content, not as visual noise.

Huddle MD: editorial discipline and clarity

Borrow the restrained information architecture: generous whitespace, strong typographic hierarchy, clear section labels, deliberate card groupings, thin borders and a composed editorial feel. This reference should prevent the site from becoming cluttered or overly childish.

TriVision image: education homepage architecture

Borrow the broad page composition: confident oversized hero statement; a horizontal strip or collage of education photography; a split image-and-copy introduction; a distinct programme or benefits presentation; a highlighted information/statistics-style band only if the exact supplied content supports it; parent testimonial treatment; and a strong footer. The reference is useful for sequencing and visual balance, not for its text, statistics or brand identity.

The resulting SmartBryte direction

Create a modern, parent-trustworthy education brand with a youthful, optimistic visual personality. It should feel more considered and editorial than a typical children's website, but warmer and more expressive than a corporate school website. Use a clear content rail, confident typography, spacious sections, rounded photographic crops, a small library of abstract decorative shapes, and colourful programme cards. The design must feel like a deliberate synthesis rather than a collage of borrowed components.

Important conflict resolution

The two MD files describe different systems. SuperHi uses a pale-blue canvas, vivid flat paper-cut shapes and a violet action colour; Huddle uses a white/off-white canvas, muted sage/lavender/rose cards, hairline borders and a flat editorial approach. Do not apply every token from both systems at full strength. Use a calm light base and a controlled, SmartBryte-specific selection of accents. Use the SuperHi-style shapes sparingly, and let Huddle's restraint govern spacing, legibility and card organisation. Do not blindly inherit either reference's exact brand palette or action-button colour.

4. Art direction and UI system

Colour approach

• Start from a warm white or very light neutral base, with pale blue used as a soft supporting surface where it helps create section rhythm.

• Use a restrained combination of muted sage, lavender and dusty rose for programme/feature cards, inspired by Huddle.

• Use a small number of brighter yellow, blue or purple decorative shapes inspired by SuperHi and WonderKids. Keep these as accents, not competing backgrounds.

• Maintain high contrast for all body copy and controls. Do not place long text over busy shapes or photographs.

• Do not introduce unrelated gradients, neon effects, glassmorphism, heavy blur, or a generic SaaS dashboard aesthetic.

Typography

• Use a modern, highly legible sans-serif family. Inter or Manrope are acceptable practical substitutes for the custom display/text families described in the SuperHi reference; a similar clean geometric sans can stand in for Huddle's Nng.

• Use large, confident display typography for the hero and section headings, with regular or medium weights rather than making every heading excessively bold.

• Use comfortable body sizes and line heights for parent-focused reading. Avoid tiny body text.

• Use small uppercase micro-labels sparingly for section wayfinding if they do not add new marketing copy.

Shapes, cards and buttons

• Use rounded image crops and friendly card corners. Keep one consistent radius family across the page.

• Use a mix of flat hairline borders and very subtle separation. Avoid heavy blurred shadows.

• Use pill-shaped primary CTAs with a clear arrow or directional cue where appropriate.

• Decorative shapes should be simple, flat, geometric and positioned behind content. They must never obstruct text, faces or key controls.

• Programme cards should be visually distinct from one another but remain part of one system. Use the age groups as the organising principle.

Photography and imagery

• Use the supplied reference images for visual guidance only; do not reuse their logos, text, statistics, testimonials or school-specific claims.

• Use relevant, authentic-looking education imagery: children learning, guided online learning, collaboration, technology exploration and project-based activity.

• Keep image crops consistent and avoid a random stock-photo collage. Use a deliberate image sequence or collage inspired by the references.

• Do not imply that any pictured person is a SmartBryte teacher or student unless the user supplies actual SmartBryte photography.

Responsive behaviour

• Desktop: use a centered content rail with generous margins and balanced multi-column layouts.

• Tablet: reduce columns and preserve clear section hierarchy.

• Mobile: stack all multi-column content, keep CTAs easy to tap, maintain readable line lengths and prevent decorative shapes from covering content.

• Ensure navigation, cards, FAQ content and footer remain usable on narrow screens.

5. Homepage architecture and section-by-section design

01 — Header / navigation

Create a clean wordmark area for SmartBryte and a compact navigation row. Use only labels that map to actual homepage sections: Home, Why SmartBryte, Programmes, What Your Child Gains, FAQs. Include an Apply Now CTA. Do not invent extra pages or routes. On click, scroll to the corresponding section or the final CTA.

02 — Hero

Make the headline the visual anchor. Use the exact hero headline and supporting paragraph. Pair it with the two supplied CTAs and the age-range note. The composition may use a large type block with a curated education image cluster or horizontal photo strip, drawing on the TriVision hero/photo sequence and the playful WonderKids imagery. Keep the headline readable and avoid text over photography.

03 — SmartBryte introduction

Use an editorial split layout: exact heading and two exact paragraphs on one side; one strong education/technology learning image or restrained image composition on the other. This should communicate the reason SmartBryte exists without adding claims.

04 — Why Choose SmartBryte

Use the exact introduction followed by five clearly differentiated benefit modules: Academic and Digital Education; Personalised Teacher Support; Practical, Hands-on Learning; Flexible Learning Experience; Learning Beyond the Classroom. Each title and paragraph must remain verbatim. Use a grid or staggered card layout with restrained visual accents.

05 — Our Programmes

Introduce the three age groups, then present three programme cards in a consistent system. Each card must include its exact age range, headline, paragraph, learning list and CTA. Use a clear visual distinction between Junior Learners, Teen Learners and Young Adults without implying different prices or unprovided outcomes.

06 — What Your Child Gains

Use the exact heading and introduction, followed by the five exact benefit headings and paragraphs. A clean editorial grid, numbered sequence or visual list is appropriate. Do not invent icons with implied claims; simple decorative marks are enough.

07 — Testimonials

Use the exact heading. The source explicitly says this section will be populated with genuine parent testimonials once the school begins operations. Do not fabricate quotes, names, ratings, avatars or parent identities. Render a restrained placeholder state using only that supplied note, or a clean empty-state panel that preserves the section without pretending testimonials exist.

08 — Frequently Asked Questions

Use the exact heading and all nine exact questions and answers. A simple accordion is acceptable as a frontend-only interaction. Keep all wording unchanged. Do not add questions or answers.

09 — Final enrolment CTA

Create a visually distinct closing section using the exact headline, both supporting paragraphs and the exact Apply Now button label. Do not invent urgency, discounts, deadlines or guarantees.

10 — Footer

Create a simple footer that reinforces the SmartBryte wordmark and provides only navigation to homepage sections. The supplied homepage copy does not provide a phone number, email address, social links, legal links or physical address for the footer; do not invent any. Keep it minimal if there is no additional approved footer content.

6. Exact-copy and content integrity rules

• The copy in the next section is approved source content. Use it exactly as written, including punctuation, capitalisation, age ranges, headings, CTA labels and paragraph order.

• Do not paraphrase, summarise, shorten, expand, proofread, localise or reframe the copy.

• Do not invent placeholder testimonials. The supplied note is the only permitted testimonial-section content until genuine testimonials are supplied.

• Do not invent programme fees, dates, class schedules beyond those already stated, teacher biographies, school statistics, student counts, accreditations, certifications, results or guarantees.

• Do not use copy visible inside the WonderKids or TriVision reference images. Those are design references only.

• Do not use sample copy from the SuperHi or Huddle MD files. Those files are design references only.

• If a UI element seems to require missing information, omit that element or use a neutral structural treatment without adding words. Ask the user rather than fabricating.

Permitted structural labels

Navigation labels and short section identifiers may be used only when they are direct, unambiguous labels for the supplied sections. They must not introduce new claims or marketing language. Prefer the actual section headings wherever possible.

7. Approved SmartBryte homepage content — reproduce verbatim

The following is the authoritative page copy. Preserve every line and paragraph exactly.

1. HERO SECTION

Headline:

Turn Your Child Into a Future-Ready Genius.

Supporting text:

Give your child the knowledge and skills to excel in school, understand technology, solve problems and create opportunities in the world ahead.

Primary CTA:

Explore Our Programmes

Secondary CTA:

Apply Now

Supporting text:

For learners aged 7–22.

2. INTRODUCTION TO SMARTBRYTE

Headline:

Education should prepare children for more than examinations.

Paragraph 1:

The world is changing, and the knowledge and skills that young people need to succeed are changing with it. Gone are the days when good grades alone were enough to make a young person ready for the world of work. Today, especially in the age of AI, children need to know how to use technology, think through problems, develop ideas and turn what they know into something the world values.

Paragraph 2:

That's what SmartBryte brings to your child's education.

Paragraph 3:

Alongside their regular academic learning, our students explore technology, learn how to use AI, develop practical digital skills and work on projects that help them put their knowledge to use. They get to discover their interests, build confidence in their abilities and develop skills that can open doors to future opportunities.

3. WHY CHOOSE SMARTBRYTE?

Headline:

An education that gives your child more.

Introduction:

Choosing the right learning opportunities for your child matters. Beyond what they learn in school, they need opportunities to explore their interests, understand technology and develop skills they can put to use.

Lead-in:

At SmartBryte, we make that possible through:

Academic and Digital Education

Your child doesn't have to choose between academic learning and digital skills. We bring both together, giving them a stronger foundation in school subjects while introducing them to skills that are becoming increasingly important in today's world.

Personalised Teacher Support

Every student gets a dedicated teacher who follows their learning progress, provides guidance and helps them get the best out of their classes. Parents also have direct access to their child's teacher, so you never have to wonder how your child is doing.

Practical, Hands-on Learning

We don't want students to spend all their time listening to lessons and taking notes. They get to work on assignments, complete projects and apply what they learn to real-life situations.

Flexible Learning Experience

Your child can learn from home through our weekly live online classes and pre-recorded lessons, while also enjoying monthly physical learning sessions in Lekki, Lagos.

Learning Beyond the Classroom

The skills your child develops at SmartBryte can go beyond their regular schoolwork. We want them to become more confident in using technology, exploring ideas, solving problems and creating things of their own

4. OUR PROGRAMMES

Headline:

The right learning experience for every stage of growth.

Introduction:

Children don't all learn the same way, and a seven-year-old shouldn't have the same learning experience as a seventeen-year-old. That's why we've structured our programmes around three age groups, with learning experiences suited to the needs and abilities of each stage.

Junior Learners

Age range:

Ages 7–12

Headline:

Building strong foundations for a brighter future.

Description:

These are the years when children are curious, eager to explore and discovering what they are capable of. Our Junior Learners programme gives them the opportunity to build strong academic foundations while getting introduced to technology and digital skills in ways they can understand and enjoy.

What they'll learn:

• Science, Technology, English and Mathematics.

• Introduction to computers and digital literacy.

• Creative thinking and problem-solving.

• Introduction to coding and technology.

• Age-appropriate creative and digital projects.

CTA:

Explore Junior Learners

Teen Learners

Age range:

Ages 13–19

Headline:

Helping teenagers turn their interests into useful skills.

Description:

Teenage years are an important time to discover interests, develop abilities and start exploring future possibilities. Our programme helps teenagers strengthen their academic knowledge while learning practical digital skills they can use to build projects, express their creativity and explore potential career paths.

What they'll learn:

• Science, Technology, English and Mathematics.

• Website development and coding.

• Artificial intelligence and AI fluency.

• Content creation and copywriting.

• Digital marketing and sales.

• Practical projects and problem-solving.

CTA:

Explore Teen Learners

Young Adults

Age range:

Ages 20–22

Headline:

Developing skills that open doors to opportunities.

Description:

At this stage, learning should begin to connect more directly with the opportunities young adults want to pursue. Whether your child is interested in technology, entrepreneurship, freelancing or building a career, our programme provides opportunities to develop practical skills and gain experience through real projects.

What they'll learn:

• Advanced digital skills and technology.

• Website and mobile application development.

• Artificial intelligence and practical AI tools.

• Content creation and copywriting.

• Sales, marketing and digital entrepreneurship.

• Practical projects and professional development.

CTA:

Explore Young Adults

5. WHAT YOUR CHILD GAINS

Headline:

We want your child to leave with more than just what they learn in class.

Introduction:

Imagine your child being able to confidently use technology, build something from an idea, solve problems independently and recognise opportunities around them. These are the kinds of abilities we want every SmartBryte student to develop.

Confidence to Explore and Try New Things

Your child gets the opportunity to explore different areas of knowledge, discover their interests and become more confident in their abilities.

The Ability to Solve Problems

Through academic lessons and practical projects, students learn to think through challenges, find solutions and approach problems differently.

Practical Digital Skills

They learn how to use technology, work with AI tools and develop digital skills that can be useful in their future careers and businesses.

The Ability to Turn Ideas into Projects

Rather than keeping everything they've learnt in their notebooks, students get opportunities to put their knowledge to work and create things of their own.

A Head Start in the World of Opportunities

The earlier children become familiar with technology and practical skills, the more time they have to explore their interests and prepare for the opportunities ahead.

6. TESTIMONIALS

Headline:

Hear from parents who have experienced the SmartBryte difference.

Source note:

This section will be populated with genuine parent testimonials once the school begins operations.

7. FREQUENTLY ASKED QUESTIONS

Headline:

Got questions? We have answers.

1. What age groups can enrol at SmartBryte?

We welcome learners between the ages of 7 and 22. Our programmes are divided into three groups: Junior Learners (7–12), Teen Learners (13–19) and Young Adults (20–22).

2. Does SmartBryte replace conventional schooling?

No. SmartBryte is a supplementary educational programme. Your child can continue attending their regular school while taking advantage of the additional academic and digital skills training we offer.

3. What will my child learn at SmartBryte?

Our curriculum combines Science, Technology, English and Mathematics with practical digital skills such as website development, AI fluency, mobile app development, content creation, copywriting, sales and marketing.

4. How are classes conducted?

We have weekly live online classes via Zoom, alongside pre-recorded lessons that students can access for additional learning. We also organise monthly physical classes in Lekki, Lagos.

5. Will my child have a personal teacher?

Yes. Every student is assigned a dedicated teacher who provides guidance and follows their learning progress. As a parent, you'll also have direct access to your child's teacher.

6. How do you assess students' progress?

Students are assessed through tests, examinations, assignments and practical projects. This helps us evaluate their understanding of what they've learnt and how well they can apply it.

7. How much does it cost to enrol?

Our tuition is structured around three-month payment periods. The fees vary depending on the programme your child enrols in. You can find the relevant fees and payment information on our programme page.

8. Will my child receive a certificate?

Yes. Students who successfully complete the relevant programme requirements will receive certificates. Details of the awarding and recognition arrangements will be provided during enrolment.

9. How can I enrol my child?

Simply visit our application page, select the appropriate programme for your child and complete the application process. Enrolment is open to eligible learners within our three age groups.

8. FINAL ENROLMENT SECTION

Headline:

Your child's future is worth investing in.

Supporting text 1:

Don't let your child's education stop at what they learn in school. Give them the opportunity to explore technology, develop practical skills, discover their abilities and prepare for a world full of opportunities.

Supporting text 2:

At SmartBryte, we're ready to help them get started.

CTA button:

Apply Now

8. Implementation and quality requirements

Build quality

• Produce a complete, polished homepage rather than a wireframe or a collection of disconnected sections.

• Use reusable components for navigation, buttons, programme cards, benefit cards, FAQ items and footer elements.

• Use semantic HTML structure and accessible heading order.

• Provide visible hover, focus and active states for interactive elements.

• Use meaningful alt text for content images; decorative shapes should be hidden from assistive technology.

• Optimise image sizes and use responsive image behaviour to avoid unnecessarily large downloads.

• Avoid layout shift: reserve image dimensions/aspect ratios and keep card heights consistent where appropriate.

• Check colour contrast, keyboard navigation, touch target sizes and mobile overflow.

Content QA checklist

• Every heading and paragraph matches the approved copy exactly.

• All three programme age ranges are correct: 7–12, 13–19 and 20–22.

• All programme learning lists are complete and in the correct order.

• All nine FAQs and answers are present and unedited.

• No invented testimonials, statistics, fees, teacher names, contact details or credentials appear.

• The testimonials section uses the supplied note rather than fabricated social proof.

• The final CTA reads exactly 'Apply Now'.

Visual QA checklist

• The design reflects a synthesis of both MD references and both supplied website images.

• The page feels like SmartBryte, not a clone of WonderKids, TriVision, SuperHi or Huddle.

• The hero is visually strong and communicates the offer immediately.

• The page uses a clear visual rhythm and consistent spacing.

• Decorative elements do not interfere with reading or navigation.

• Programme cards are easy to compare and scan.

• The desktop, tablet and mobile layouts have all been checked.

Final Lovable acceptance criteria

The task is complete only when Lovable has built and previewed a responsive SmartBryte homepage that uses the exact supplied copy, respects the homepage-only scope, visibly synthesises the attached references into one coherent design, and contains no invented factual or marketing content.

9. Instruction to give Lovable with the attachments

Copy the following instruction into Lovable after attaching this PDF, DESIGN (10).md, DESIGN (9).md and both reference images:

> Build the SmartBryte homepage using the attached SmartBryte Lovable Homepage Build Brief PDF as the authoritative product, scope and content specification. Before designing or coding, fully inspect both attached

design MD files and both attached reference images. Do not skim them. Identify the shared visual principles, the differences between the references, and the most useful layout and component ideas in each. Then synthesise those ideas into one original, coherent SmartBryte visual direction. The WonderKids image is a reference for playful children's-learning visual energy; the TriVision image is a reference for education-site composition and section sequencing; DESIGN (10).md (SuperHi) is a reference for playful geometric shapes, colour accents, pill controls and creative-school energy; DESIGN (9).md (Huddle) is a reference for editorial restraint, whitespace, typographic hierarchy, hairline borders and organised card systems. Do not clone any reference or copy its brand identity. Resolve conflicting design tokens deliberately rather than combining every colour and rule literally.

Build ONLY the SmartBryte homepage as one responsive page. Do not create separate pages, backend features, login, registration, payment, LMS, booking, forms, databases or other functionality. Use the exact SmartBryte homepage copy included in the PDF. Do not rewrite, paraphrase, shorten, expand, correct or invent any wording. Do not use text, names, statistics, testimonials or claims from the reference images or MD files. Do not invent fees, teachers, contact details, statistics, awards, accreditations or testimonials. The testimonials section must use only the supplied note explaining that genuine testimonials will be added once the school begins operations.

Follow the PDF's section architecture, visual direction, responsive requirements and QA checklist. Use lightweight in-page navigation and simple homepage-native interactions only. Where the source content refers to a separate programme or application page, do not fabricate that page or its URL. Keep the relevant CTA visually present without pretending an unavailable destination or backend exists.

First provide a concise design interpretation of how you are combining the references, then implement the homepage. After implementation, review the page against the PDF line by line for exact copy, missing sections, responsive behaviour and invented content. Correct any deviations before presenting the finished preview.
